AgentWorkShop platform boundary

Owner
human, sole authority

Objective + success criteria

Gate ①
plan approval

Gate ②
result acceptance

Gate ③
completion gate

Governed Route Layer — Project
deterministic · LLM-free scheduling

Office Channel · Leader
LLM proposes the plan — never dispatches

Deterministic Dispatcher no-LLM zone
deps terminal ∧ DRAFT → priority

Kernel M4 route loop 10 s / 30 s
ingress · ledger · watchdog · outbox

Results Chain
draft → review → acceptance → gate

→ artifacts · weekly report

Channel A — Frontend
LLM lead — omp · opencode · claude
governed tools · exec modes
budget · step limits

running W1

W1 done → dependency released

Channel B — Backend
same governed envelope;
N channels — relay order set only by the dispatcher

running W2

Channels C…N — same envelope

AUDIT LEDGER — decisions · events · journal

Data plane
SQLite · TSDB · object store

DCW write throat
range ∩ steps ∩ 60 s ∩ recipe

Physical line
PLC · sensors · MES

dispatch · callback / state · human approval · data · governed writes · LLM-free guarantee

① dispatch work item (brief · budget) ② completion callback ③ release next by dependency
